INQUIRY

to finance the production of domestic incubators for poultry breeding

TM Broody represents a line of incubators for breeding poultry and accessories to them. These are modern high-tech electronic devices designed to incubate eggs of domestic and exotic bird species such as chickens, ducks, geese, turkeys, quail, pheasants, guinea fowl, pigeons, parrots, peacocks and others. Broody incubators, having the maximum degree of automation, have unique functions that have no analogues in the world. The distinctive features of these incubators are their design, the availability of Wi-Fi and optional equipment. This business niche is not sufficiently developed all over the world. Our developments fundamentally differ from existing models by their principles. The designs of modern plastic foam (plastic) incubators force consumers to pay for air transportation. Therefore, the buyer is limited in the choice of the territorial location of the manufacturer and his location. In addition, Broody accessories are suitable for any incubator. They allow national producers to improve their own product. And farmers independently make an incubator for their farm.

The principal objective of this project is the creation of technological and quality products that can compete in the global market.

The exclusive distributor of TM "Broody" in Ukraine is LLC "Barcelona Sky".

Place of registration: Kiev, Ukraine.

Results. Broody is registered in Ukraine. Products and their components have national patents. The patent for invention is in the stage of qualification examination. Our intellectual assets are protected at the international level and the products are preparing to be certified.

Our team has already passed the stage of practical implementation of developments. The flagship model is put on sale in Ukraine this autumn. But at this stage we have to look for an additional source of financing to complete the incubator lineup, introduce additional functions into the software shell (firmware) of incubators, make and test samples, obtain international patents and quality certificates.

Expected costs of project implementation (USD):

Expense item	2017	2018	2019
Labor costs for specialists of a narrow profile	1200	6000	6000
Materials	330	-	-
Costs for works co-executors (outside organization)	400	-	-
Costs for certification	900	3000	2000
Costs of international legal protection of intellectual property	1100	3000	2300

Borrowed funds do not include expenses related to the current activities of the organization (organizational / administrative costs). Depending on the amount of investment, the terms can vary both in the smaller side and in the larger.

The attraction of financing can be in the form of grants, funds to support entrepreneurship, loans provided by investors, loans or other types of capital. And also project financing, in which the project is directly invested.

The company actively and passively searches for partners (distributors, dealers). Accepts and sends out typical commercial offers and proposals for the conclusion of a contract for the supply of goods.

If the request provoked interest, then the organization can submit the full version of the project proposal. We are open to dialogue and ready to cooperate of any kind.

Thank you for your attention,
